

Experiment No: 7

Title:

To create a Scrum Board for Scrum Master using JIRA Tool.

Aim:

To create and manage a Scrum Board using the JIRA tool for tracking project tasks in Agile development.

Theory:

Scrum is an Agile framework used for managing software development projects through iterative progress known as sprints. It improves collaboration among team members and ensures timely delivery of project modules. Scrum divides tasks into manageable units and tracks them using workflow stages.

A Scrum Board is a visual representation of project progress that organizes tasks into different stages such as To Do, In Progress, and Complete. It helps Scrum Masters monitor team performance, identify bottlenecks, and ensure smooth workflow execution.

JIRA provides built-in Scrum board functionality that allows teams to create user stories, assign tasks, prioritize work items, and monitor sprint progress efficiently.

Requirements:

- JIRA Software account
 - Web browser
 - Internet connection
-

Procedure:

Step 1: Login to JIRA software and create a new Agile project workspace.

The screenshot displays the Jira interface for a project named "GMAIL". The left sidebar shows the navigation menu with options like "For you", "Recent", "Starred", "Apps", "Plans", "Spaces", and "Goals". The main content area is titled "GMAIL board" and shows the "Backlog" view. The backlog is organized into two sections: "Epic" and "Backlog". The "Epic" section contains two items: "Verify Gmail functionality" and "Verify Gmail Functionality". The "Backlog" section contains two items: "GMAIL-2 Verify Gmail functionality" and "GMAIL-5 Verify logout functionality". The right sidebar shows the "GMAIL Sprint 2" view, which includes a "Start sprint" button and a list of work items with their status and assignees.

Step 2: Select Scrum board template while creating the project.

The screenshot displays the Jira interface for the same "GMAIL" project, but now showing the "Active sprints" view. The left sidebar is identical to the previous screenshot. The main content area is titled "GMAIL board" and shows the "Active sprints" view. The active sprint is "GMAIL-3 Verify compose mail functionality (3 subtasks)". The sprint board is divided into three columns: "TO DO", "IN PROGRESS", and "DONE". The "TO DO" column contains two items: "Verify login functionality" and "Verify inbox functionality". The "IN PROGRESS" column is empty. The "DONE" column contains three items: "Analyse requirement", "Design text cases", and "Execute text cases". The right sidebar shows the "GMAIL Sprint 2" view, which includes a "Complete sprint" button and a list of work items with their status and assignees.

Step 3: Create tasks such as Requirement Analysis, System Research, Parking Slot Detection Design, Model Development, Backend Development, Frontend Dashboard, Testing, and Deployment.

Step 4: Organize tasks into workflow columns such as To Do, In Progress, and Complete.

Step 5: Move tasks between columns according to their execution status during sprint progress.

Step 6: Monitor sprint progress using Scrum board visualization for effective project tracking.

Result:

The image displays two screenshots of the Jira software interface, illustrating the creation and management of a Scrum Board.

Top Screenshot: Issue Details

The top screenshot shows a Jira issue titled "Gmail login functionality not working with valid data" (GMAIL-12). The issue is in the "To Do" column of a Scrum board. The "Details" panel on the right shows the following information:

- Assignee: Unassigned (with a link "Assign to me")
- Reporter: Geet
- Development: Create branch, Create commit
- Labels: None
- Due date: None
- Start date: None
- Sprint: GMAIL Sprint 2
- Priority: Medium

The "Activity" panel shows a comment section with a "Who is working on this...?" button and a "Can I get more info...?" button. The "More fields" section shows "Original estimate, Time tracking, Components, T...". The "Automation" section shows "Rule executions".

Bottom Screenshot: Sprint Completion

The bottom screenshot shows the "GMAIL board" with a "Complete GMAIL Sprint 2" dialog box. The dialog box indicates that the sprint contains 2 completed work items and 2 open work items. It provides instructions on how to move open work items to a new sprint or the backlog. The "Move open work items to" dropdown is set to "New sprint". The "Complete sprint" button is highlighted.

Successfully created and managed a Scrum Board using JIRA tool for tracking project tasks through different workflow stages.

Conclusion:

Thus, the Scrum Board was successfully implemented using JIRA, enabling efficient task organization, sprint tracking, and workflow management in an Agile development environment.
